Listing and Amendments to the Claims

Please rewrite claims 1-2, 4 and 6-10 as indicated.

1. (Currently Amended) ~~Turntable for a A~~ drive for storage media in disc form, having a turntable with a bore for receiving in which a motor shaft of a drive motor is located, ~~and intended to be permanently fixed to said motor shaft,~~ wherein the diameter of the bore is being greater than the diameter of the motor shaft, ~~so such~~ that there is a gap between the a wall of the bore and the motor shaft, wherein the turntable is fixed to said motor shaft with an adhesive or another material filled in the gap between the wall of the bore and a lateral position of the turntable is adjustable in relation to an axis of rotation of the motor shaft.
2. (Currently Amended) ~~Turntable~~ The drive according to Claim 1, wherein the bore is substantially cylindrical.
3. (Cancelled).
4. (Currently Amended) ~~Turntable~~ The drive according to Claim 1, wherein the bore is substantially conical.
5. (Cancelled).
6. (Currently Amended) ~~Turntable for a A~~ drive for storage media in disc form, having a turntable with a bore for receiving in which a motor shaft of a drive motor is located, wherein the turntable ~~comprises~~ comprising at least a first part mounted on the motor shaft, ~~which is fixed in relation to an axis of rotation of the motor shaft,~~ and a second part, ~~whose lateral position in relation to the axis of rotation of the motor shaft is adjustable and which is intended to be permanently~~

Serial No.: 10/575,310

PD030106

wherein said second part is fixed to said motor shaft and/or said first part with an adhesive or another material filled in a gap between the second part of the turntable and the motor shaft and/or a gap between the second part of the turntable and the first part of the turntable, the first part and the second part being arranged such that there is a gap between the first part and the second part.

7. (Currently Amended) Method A method for mounting a turntable with a bore on a motor shaft, it being possible to set an inclination and/or a lateral position of the turntable in relation to the motor shaft, comprising the steps of:

positioning the motor shaft in a defined position,

introducing the motor shaft into the bore of the turntable,

adjusting the inclination and/or the lateral position of the turntable in relation to the motor shaft, and

permanently fixing the motor shaft in the bore of the turntable by filling a gap between a wall of the bore and the motor shaft with an adhesive or another material.

8. (Currently Amended) Method A method of mounting a turntable with a bore on a motor shaft, the turntable comprising at least a first part, which is fixed in relation to an axis of rotation of the motor shaft, and a second part, whose inclination and/or lateral position in relation to the motor shaft is adjustable, comprising the steps of:

mounting the first part of the turntable on the motor shaft,

positioning the motor shaft in a defined position,

adjusting the inclination and/or the lateral position of the second part of the turntable in relation to the motor shaft, and

permanently fixing the second part of the turntable

Serial No.: 10/575,310

PD030106

on the motor shaft and/or on the first part of the turntable by filling a gap between the second part of the turntable and the motor shaft and/or a gap between the second part of the turntable and the first part of the turntable with an adhesive or another material.

9. (Currently Amended) ~~Device~~ A device for reading from and/or writing to recording media in disc form, wherein it has a ~~turntable~~ drive according to Claim 1.

10. (Currently Amended) ~~Device~~ A device for reading from and/or writing to recording media in disc form, wherein it has a ~~turntable~~ drive according to Claim 6.
